

Case 1--Surgery

Male-Age 29 presents for surgical resection of a bronchial tumor. CT scan revealed a right main stem bronchial tumor extending from the orifice of the right upper lobe bronchus proximally onto the main stem bronchus.

Treatment plan: Surgery only; right upper lobe sleeve resection

Procedure:

02/12/07: Bronchoscopy, right thoracotomy, right upper lobe sleeve resection with reattachment of the bronchus intermedius to the main stem bronchus at the carina, mediastinal lymph node dissection

Pathology diagnosis:

Right thoracotomy, right upper lobe sleeve resection

- Bronchial adenocarcinoma and carcinoid combined
- Margins negative
- Seven lymph nodes removed and are all negative

Case 2--Surgery

85-year-old female presents with a large rectal polyp, positive for adenocarcinoma. The polyp is located at the anorectal junction and measures 3 cm in diameter. Post operative therapy not documented.

1/12/08: Trans-anal endoscopic microsurgical resection of rectal mass

Pathology final diagnosis:

Rectal lesion, transanal excision: mucinous adenocarcinoma, mod diff

- Arising in an adenomatous polyp
- Approximate tumor size , 2.0 cm
- Tumor invades the muscularis propria
- Margins negative
- One of two peri-rectal lymph nodes positive for metastatic adenocarcinoma

Case 3--Surgery/Radiation

80-year-old female diagnosed with an invasive breast cancer via ultrasound guided needle biopsy on 10/30/07. Treatment plan for this case is conservative surgery and post op radiation therapy and hormonal therapy. Patient underwent a lumpectomy and sentinel lymph node sampling on 11/29/07 with placement of a spacer. Mammosite was inserted by 12/5/07. On 12/17/07 patient started on high dose brachytherapy (Iridium 192, Mammosite) receiving 10 FX until 12/21/07. Total dose 3400 (cGy), no boost planned.

Pathology final diagnosis:

Right breast biopsy: Infiltrating ductal carcinoma, mod diff

Right breast lumpectomy and sentinel node sampling

- Infiltrating ductal ca, tumor size = 0.8 cm
- Negative lymph nodes 0/2
- Microscopic residual ductal ca involving the lateral margin
- ER/PR strongly positive

Case 4--Surgery/Chemo/Radiation

59-year-old male presents with left arm weakness and numbness on his left face and trunk. Work-up revealed a brain mass in the ventricles.

Treatment Plan:

Patient was put on an RTOG protocol which is gross total resection of the tumor followed by conformal radiotherapy and Temodar.

On 10/17/07 patient underwent gross total resection of the tumor. Pathology revealed a glioblastoma multiforme (WHO grade IV). On 11/07/07 patient started on concomitant chemo/radiation therapy. From 11/7/07 to 12/17/07 patient received conformal radiation therapy 6000 cGy in 30 fractions to the right parietal brain. That patient also received Temodar.

Case 5--Surgery/Radiation

29-year-old female presents with a large mass on the left side at the base of the tongue. Clinically there was no palpable cervical adenopathy noted by physical exam and on CT scans.

2/29/07: Biopsy of tongue lesion

3/29/07: Partial glossectomy

- Mucoepidermoid carcinoma, intermediate grade
- Tumor size = 2.0 cm
- Margins positive, NOS

Post op radiation therapy:

5/19/07 to 7/13/07

IMRT x/6, 33 fractions

Total dose: 6600 cGy

No Boost

Case 6--Chemo/Hormone

50-year-old patient presented with complaints of left shoulder & abdominal pain. Lab revealed pancytopenia. Bone marrow biopsy performed on 8/4/06 revealed precursor b-cell lymphoblastic leukemia.

On 8/12/06 patient received a couple cycles of Duanorubicin, Vincristine, L-Asparagine and Prednisone.

Patient expired on 10/10/06.
