21 Partial mastectomy WITH nipple resection
22 Lumpectomy or excisional biopsy
23 Reexcision of the biopsy site for gross or microscopic residual disease
24 Segmental mastectomy (including wedge resection, quadrantectomy, tylectomy)

Procedures coded 20-24 remove the gross primary tumor and some of the breast tissue (breast-conserving or preserving). There may be microscopic residual tumor.

30 Subcutaneous mastectomy

A subcutaneous mastectomy is the removal of breast tissue without the nipple and areolar complex or overlying skin. It is performed to facilitate immediate breast reconstruction. Cases coded 30 may be considered to have undergone breast reconstruction.

[**NOTE:** If axillary lymph nodes are present in the specimen, code the Surgery of Primary Site field to 51. If there are no axillary lymph nodes present in the specimen, code the Surgery of Primary Site field to 41. Placement of a tissue expander at the time of original surgery means that reconstruction is planned as part of the first course of treatment.]

A total (simple) mastectomy removes all breast tissue, the nipple, and areolar complex. An axillary dissection is not done.

For single primaries only, code removal of involved contralateral breast under the data item **Surgical Procedure/Other Site** (NAACCR Item # 1294).

If contralateral breast reveals a second primary, each breast is abstracted separately. The surgical procedure is coded 41 for the first primary. The surgical code for the contralateral breast is coded to the procedure performed on that site.

Reconstruction that is planned as part of first course treatment is coded 43-49 or 75, whether it is done at the time of mastectomy or later.
SURGERY OF PRIMARY SITE

58    Tissue
59    Implant
63    Combined (Tissue and Implant)

Removal of all breast tissue, the nipple, the areolar complex, and variable amounts of breast skin in continuity with the axilla. The specimen may or may not include a portion of the pectoralis major muscle.

If contralateral breast reveals a second primary, it is abstracted separately. The surgical procedure is coded 51 for the first primary. The surgical code for the contralateral breast is coded to the procedure performed on that site.

For single primaries only, code removal of involved contralateral breast under the data item Surgical Procedure/Other Site (NAACCR Item #1294) or Surgical Procedure/Other Site at This Facility (NAACCR Item #674).

[NOTE: In continuity with or “en bloc” means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen. “Tissue” for reconstruction is defined as human tissue such as muscle (latissimus dorsi or rectus abdominis) or skin in contrast to artificial prostheses (implants). Placement of a tissue expander at the time of original surgery indicates that reconstruction is planned as part of the first course of treatment. Assign code 51 or 52 if a patient has an excisional biopsy and axillary dissection followed by a simple mastectomy during the first course of therapy.]

The pathology report may or may not identify ovarian tissue. A debulking is usually followed by another treatment modality such as chemotherapy.**

[**NOTE:** Debulking or cytoreductive surgery is implied by the following phrases (This is not intended to be a complete list. Other phrases may also imply debulking).
   Adjuvant treatment pending surgical reduction of tumor
   Ovaries, tubes buried in tumor
   Tumor burden
   Tumor cakes
   Very large tumor mass]

Do not code multiple biopsies alone as debulking or cytoreductive surgery. Do not code debulking or cytoreductive surgery based only on the mention of “multiple tissue fragments” or “removal of multiple implants.” Multiple biopsies and multiple specimens confirm the presence or absence of metastasis].
