Q&A

- Please submit all questions concerning webinar content through the Q&A panel.

Reminder:
- If you have participants watching this webinar at your site, please collect their names and emails.
- We will be distributing a Q&A document in about one week. This document will fully answer questions asked during the webinar and will contain any corrections that we may discover after the webinar.

LARYNX

• Supraglottis
  • Epiglottis
  • Suprathyroid
  • Aryepiglottic folds
  • Ventricular bands (False Vocal Cords)
  • Ventricular folds
  • Arytenoids

SQUAMOUS CELL CARCINOMA

• Nearly all laryngeal carcinomas of the larynx are epithelial
• Primarily squamous cell carcinoma
• Other types of epithelial carcinoma's of the larynx include
  • Basaloid squamous carcinomas
  • Spindle-cell (i.e., sarcomatoid) carcinomas
  • Small-cell carcinomas
  • Nasopharyngeal-type undifferentiated carcinomas (i.e., lymphoepitheliomas)
  • Carcinomas of the minor salivary gland
**MUCOSAL MELANOMA OF THE HEAD AND NECK**

- Occur in mucosal sites of the head and neck
  - Two thirds occur in nasal cavity and paranasal sinuses
  - One quarter occur in oral cavity
  - Remainder occur in other sites of the head and neck
- Highly Aggressive
  - Cancers limited to the mucosa are assigned T3 N0 M0 Stage III
  - In situ mucosal melanoma’s very rare and are excluded from staging

AJCC Staging Manual 7th edition

**REGIONAL LYMPH NODES TERMINOLOGY**

- Ipsilateral
  - Same side as tumor
- Contralateral
  - Opposite side as the tumor
- Bilateral
  - Same side and opposite side

STAGING: LARYNX

LARYNX: CHAPTER 5
AJCC CANCER STAGE: LARYNX

- ICD-O-3 Topography Codes
  - C10.1 Anterior (lingual) surface of epiglottis
  - C32.0 Glottis
  - C32.1 Supraglottis (laryngeal surface)
  - C32.2 Subglottis
  - C32.8 Overlapping lesion of larynx
  - C32.9 Larynx NOS

- ICD-O-3 Histology Code Ranges
  - 8000-8576, 8940-8950, 8980-8981

AJCC CANCER STAGE: LARYNX CLASSIFICATION

- Clinical staging
  - Evidence prior to treatment
  - Nasolaryngoscopy
  - Laryngeal tumor biopsy
  - Radiologic nodal staging to supplement clinical exam
  - Microlaryngoscopy

- Pathologic staging
  - Evidence obtained in clinical staging and in histologic study of surgically resected specimen
  - Lymphadenectomy description describes size, number, and position of involved nodes and presence or absence of extracapsular spread (ECS)
**AJCC CANCER STAGE: LARYNX**

**T Category**
- T0: No evidence of primary tumor
- Tis: Carcinoma in situ

**Supraglottis**
- T1: Limited to 1 subsite of supraglottis with normal vocal cord mobility
- T2: Invades mucosa of more than 1 adjacent subsite of supraglottis or glottis or region outside the supraglottis without fixation of larynx

**Supraglottis**
- T3: Limited to larynx with vocal cord fixation and/or invades any of the following: postcricoid area, preepiglottic space, paraglottic space, and/or inner cortex of thyroid cartilage
- T4a: Moderately advanced local disease. Invades through the thyroid cartilage and/or invades tissues beyond the larynx
- T4b: Very advanced local disease. Invades prevertebral space, encases carotid artery, or invades mediastinal structures
AJCC CANCER STAGE: LARYNX

• T Category Glottis
  • T1: Limited to vocal cords with normal mobility
  • T1a: Limited to 1 vocal cord
  • T1b: Involves both vocal cords
  • T2: Extends to supraglottis and/or subglottis, and/or with impaired vocal cord mobility

AJCC CANCER STAGE: LARYNX

• T Category Glottis
  • T3: Limited to larynx with vocal cord fixation and/or invasion of paraglottic space, and/or inner cortex of thyroid cartilage
  • T3a: Moderately advanced local disease. Invades through outer cortex of thyroid cartilage and/or invades tissues beyond the larynx
  • T3b: Very advanced local disease. Invades prevertebral space, encases carotid artery, or invades mediastinal structures

AJCC CANCER STAGE: LARYNX

• T Category Subglottis
  • T1: Limited to 1 subglottis
  • T2: Extends to vocal cord(s) with normal or impaired mobility
  • T3: Limited to larynx with vocal cord fixation
AJCC CANCER STAGE: LARYNX

**T Category**
- **Subglottis**
  - T4a: Moderately advanced local disease. Invades through cricoid or thyroid cartilage and/or invades tissues beyond the larynx
  - T4b: Very advanced local disease. Invades prevertebral space, encases carotid artery, or invades mediastinal structures

**N Category:**
- **NX:** Regional lymph nodes cannot be assessed
- **N0:** No regional lymph node metastasis
- **N1:** Metastasis in single ipsilateral lymph node, 3 cm or less in greatest dimension
- **N2a:** Metastasis in single ipsilateral lymph node, more than 3 cm but not more than 6 cm in greatest dimension
- **N2b:** Metastasis in multiple ipsilateral lymph nodes, none more than 6 cm in greatest dimension
- **N2c:** Metastasis in bilateral or contralateral lymph nodes, none more than 6 cm in dimension
- **N3:** Metastasis in a lymph node, more than 6 cm in greatest dimension
AJCC CANCER STAGE: LARYNX

POP QUIZ

- 1/8/15 Nasolaryngoscopy with biopsy: Small tumor of left vocal cord, confined to vocal cord, squamous cell carcinoma
- 1/14/15 CT of neck and chest: No lymphadenopathy; lungs within normal limits
- 1/28/15 Hemilaryngectomy: Squamous cell carcinoma in situ, right vocal cord; squamous cell carcinoma, left vocal cord

POP QUIZ

- What is the AJCC clinical stage?

- What is the AJCC pathologic stage?
SUMMARY STAGE 2000: GLOTTIS

- **0 In situ**
  - Noninvasive; intraepithelial

- **1 Localized only**
  - Confined to glottis
    - Intrinsic larynx
    - Laryngeal commissure(s): Anterior; posterior
    - Vocal cord(s): True cord(s), true vocal cord(s)
  - Invasive tumor WITH or WITHOUT normal vocal cord mobility
    - One vocal cord; both vocal cords

- **2 Regional by direct extension only**
  - Extension to:
    - Base of tongue
    - Hypopharynx NOS
    - Postcricoid area
    - Pre-epiglottic tissues
    - Pyriform sinus (pyriform fossa)
    - Vallecula

SUMMARY STAGE 2000: GLOTTIS

- **1 Localized only**
  - Tumor involves adjacent region(s) of larynx
  - Subglottis; supraglottis (false vocal cord(s))
  - Tumor limited to larynx WITH vocal cord fixation
  - Involvement of intrinsic muscle(s)
    - Aryepiglottic
      - Corniculate tubercle; cuneiform tubercle
    - Arytenoid; cricothyroid; thyroarytenoid; thyroepiglottic; vocalis
    - Localized NOS
SUMMARY STAGE 2000: GLOTTIS

- 3 Regional lymph node(s) involved only
  - Anterior deep cervical (laterotracheal) (recurrent laryngeal)
    - Paralaryngeal
    - Paratracheal
    - Prelaryngeal: Delphian node
    - PretcRacheal
    - Cervical NOS

SUMMARY STAGE 2000: GLOTTIS

- 3 Regional lymph node(s) involved only
  - Internal jugular, NOS:
    - Deep cervical, NOS:
      - Lower NOS
      - Jugulo-omohyoid (supraomohyoid)
      - Middle
      - Upper NOS
      - Jugulodigastric (subdigastric)

SUMMARY STAGE 2000: GLOTTIS

- 3 Regional lymph node(s) involved only
  - Mandibular NOS
    - Submandibular (submaxillary)
    - Submental
    - Retropharyngeal
    - Regional lymph node(s) NOS
SUMMARY STAGE 2000: GLOTTIS
- 4 Regional by BOTH direct extension AND regional lymph node(s) involved
  - Codes 2 + 3
- 5 Regional NOS

SUMMARY STAGE 2000: GLOTTIS
- 7 Distant site(s)/lymph node(s) involved
  - Distal lymph node(s)
    - Mediastinal
    - Supraclavicular (transverse cervical)
    - Other distant lymph node(s)

SUMMARY STAGE 2000: GLOTTIS
- 7 Distant site(s)/lymph node(s) involved
  - Extension to/through
    - Cervical (upper) esophagus; cricoid cartilage; extrinsic (strap) muscles (omohyoid, sternothyroid, thyrohyoid); oropharynx; skin; soft tissues of neck; thyroid cartilage; thyroid gland; trachea
  - Further contiguous extension
  - Metastasis
- 9 Unknown if extension or metastasis
LARYNX: SUPRAGLOTTIS
C32.1

Summary Stage 2000
http://seer.cancer.gov/tools/ssm/

SUMMARY STAGE 2000: SUPRAGLOTTIS

0 In situ
• Noninvasive; intraepithelial

1 Localized only
• Invasive tumor with normal vocal cord mobility confined to
  • Supraglottis (1 subsite): Aryepiglottic fold; arytenoid cartilage; coniculate cartilage; cuneiform cartilage; epilarynx NOS; false cord(s); ventricular band(s); ventricular cavity; vestibular fold; infrahypoid epiglottis; laryngeal cartilage NOS; laryngeal (posterior) surface of epiglottis; suprhyoid epiglottis (including tip, lingual & anterior); and laryngeal surface(s)

SUMMARY STAGE 2000: SUPRAGLOTTIS

1 Localized only
• Impaired vocal cord mobility
• Tumor involves adjacent region(s) of larynx
• Tumor involves more than one subsite of supraglottis
  • WITHOUT fixation or NOS
• Tumor limited to larynx WITHOUT vocal cord fixation
• Localized NOS
SUMMARY STAGE 2000: SUPRAGLOTTIS

- 2 Regional by direct extension only
- Extension to
  - Base of tongue including mucosa
  - Cricoid cartilage
  - Hypopharynx NOS
  - Postcricoid area
  - Pre-epiglottic tissues
  - Pyriform sinus (pyriform fossa)
  - Vallecula

SUMMARY STAGE 2000: SUPRAGLOTTIS

- 3 Regional lymph node(s) involved only
  - Anterior deep cervical (laterotracheal) (recurrent laryngeal)
  - Paralaryngeal
  - Paratracheal
  - Pretracheal
  - Cervical NOS

SUMMARY STAGE 2000: SUPRAGLOTTIS

- 3 Regional lymph node(s) involved only
  - Internal jugular, NOS:
    - Deep cervical, NOS:
      - Middle
      - Upper NOS
      - Jugulodigastric (subdigastric)
SUMMARY STAGE 2000: SUPRAGLOTTIS

- 3 Regional lymph node(s) involved only
  - Mandibular NOS
  - Submandibular (submaxillary)
  - Submental
  - Retropharyngeal
  - Regional lymph node(s) NOS

SUMMARY STAGE 2000: SUPRAGLOTTIS

- 4 Regional by BOTH direct extension AND regional lymph node(s) involved
  - Codes 2 + 3
  - 5 Regional NOS

SUMMARY STAGE 2000: SUPRAGLOTTIS

- 7 Distant site(s)/lymph node(s) involved
  - Distant lymph node(s)
    - Mediastinal
    - Supraclavicular (transverse cervical)
    - Other distant lymph node(s)
SUMMARY STAGE 2000: SUPRAGLOTTIS

- 7 Distant site(s)/lymph node(s) involved
- Extension to/through
  - Cervical esophagus; extrinsic (strap) muscles (omohyoid, sternohyoid, sternothyroid, thyrohyoid); oropharynx skin; soft tissues of neck; thyroid cartilage; thyroid gland
- Further contiguous extension
- Metastasis
- 9 Unknown if extension or metastasis

LARYNX: SUBGLOTTIS

C32.2

SUMMARY STAGE 2000: SUBGLOTTIS

- 0 In situ
  - Noninvasive; intraepithelial
- 1 Localized only
  - Invasive tumor with normal vocal cord mobility confined to subglottis
  - Tumor involves adjacent region(s) of larynx
  - Vocal cords with normal or impaired mobility
  - Tumor limited to larynx WITH vocal cord fixation
  - Localized NOS
SUMMARY STAGE 2000: SUBGLOTTIS

- 2 Regional by direct extension only
  - Extension to:
    - Base of tongue
    - Hypopharynx NOS
    - Postcricoid area
    - Pre-epiglottic tissues
    - Pyriform sinus (pyriform fossa)
    - Vallecula

SUMMARY STAGE 2000: SUBGLOTTIS

- 3 Regional lymph node(s) involved only
  - Anterior deep cervical (laterotracheal) (recurrent laryngeal)
  - Paralaryngeal
  - Paratracheal
  - Prelaryngeal: Delphian node
  - Pretracheal
  - Cervical NOS

SUMMARY STAGE 2000: SUBGLOTTIS

- 3 Regional lymph node(s) involved only
  - Internal jugular, NOS:
    - Deep cervical, NOS:
      - Lower NOS
        - Jugulo-omohyoid (supraomohyoid)
    - Middle
    - Mandibular NOS
      - Submandibular (submaxillary)
      - Submental
      - Retropharyngeal
    - Regional lymph node(s) NOS
SUMMARY STAGE 2000: SUBGLOTTIS

- 4 Regional by BOTH direct extension AND regional lymph node(s) involved
  - Codes 2 + 3
- 5 Regional NOS

SUMMARY STAGE 2000: SUBGLOTTIS

- 7 Distant site(s)/lymph node(s) involved
  - Extension to/through
    - Cervical (upper) esophagus; cricoid cartilage; extrinsic (strap) muscles (omohyoid, sternohyoid, sternothyroid, thyrohyoid); oropharynx; skin; soft tissues of neck; thyroid cartilage; thyroid gland; trachea
    - Further contiguous extension
    - Metastasis
- 9 Unknown if extension or metastasis
Summary Stage 2000
http://seer.cancer.gov/tools/ssm/

LARYNX: OVERLAPPING LESION OR NOS
C32.3, C32.8, C32.9

SUMMARY STAGE 2000: LARYNX OTHER
- 0 In situ
  - Noninvasive; intraepithelial
- 1 Localized only
  - Invasive tumor confined to site of origin
  - Impaired vocal cord mobility
  - Tumor involves adjacent region(s) of larynx
  - Tumor limited to larynx with vocal cord fixation
  - Localized NOS

SUMMARY STAGE 2000: LARYNX OTHER
- 2 Regional by direct extension only
  - Extension to:
    - Hypopharynx NOS
    - Postcricoid area
    - Pre-epiglottic tissues
    - Pyriform sinus (pyriform fossa)
    - Vallecula
SUMMARY STAGE 2000: LARYNX OTHER

- 3 Regional lymph node(s) involved only
- Anterior deep cervical (laterotracheal) (recurrent laryngeal)
  - Paralaryngeal
  - Paratracheal
  - Prearyngeal: Delphian node
  - Pretabular
  - Cervical NOS

SUMMARY STAGE 2000: LARYNX OTHER

- 3 Regional lymph node(s) involved only
- Internal jugular, NOS
  - Deep cervical, NOS
    - Lower NOS
    - Jugulo-omohyoid (supraomohyoid)
    - Middle
    - Upper NOS
    - Jugulodigastric (subdigastric)

SUMMARY STAGE 2000: LARYNX OTHER

- 3 Regional lymph node(s) involved only
- Mandibular NOS
  - Submaxillary (submaxillary)
  - Submental
  - Retropharyngeal
  - Regional lymph node(s) NOS
SUMMARY STAGE 2000: LARYNX OTHER

• 4 Regional by BOTH direct extension AND regional lymph node(s) involved
  • Codes 2 + 3
• 5 Regional NOS

SUMMARY STAGE 2000: LARYNX OTHER

• 7 Distant site(s)/lymph node(s) involved
  • Distant lymph node(s)
    • Mediastinal
    • Supraclavicular (transverse cervical)
    • Other distant lymph node(s)

POP QUIZ

• Radical laryngectomy and bilateral neck dissection: 2 cm poorly differentiated verrucous carcinoma of epiglottis extends into and through thyroid cartilage with microinvasion of the thyroid; 36 lymph nodes removed; 1 malignant ipsilateral cervical node
POP QUIZ

What is the Summary Stage 2000?

a. 0 In situ
b. 1 Localized only
c. 2 Regional by direct extension only
d. 3 Regional lymph node(s) involved only
e. 4 Regional by BOTH direct extension AND regional lymph node(s) involved
f. 5 Regional NOS
g. 7 Distant site(s)/lymph node(s) involved

COLLABORATIVE STAGE DATA COLLECTION SYSTEM (CS) V0205

CS SCHEM AS

LarynxGlottic
  • C32.0
LarynxSupraglottic
  • C32.1
LarynxSubglottic
  • C32.2
LarynxOther
  • C32.3, C32.8, C32.9
SSF1: SIZE OF LYMPH NODES
- Code largest diameter of involved regional nodes
- Clinical assessment
  - Code size as described in clinical or radiographic exam
- Pathologic assessment
  - Code size as described on pathology report

SSF3 – SSF6: LYMPH NODE LEVELS FOR HEAD AND NECK
- SSF 3: Levels I-III
- SSF 4: Levels IV, V, retropharyngeal nodes
- SSF 5: Levels VI, VII, facial nodes
- SSF 6: Parapharyngeal, parotid, and suboccipital/retroauricular nodes

SSF3 – SSF6: NODE LEVELS
- Code presence or absence of node involvement
- One digit used to represent lymph nodes of a single level
- If you only have information about one level of lymph nodes, code all other lymph levels as 0
- If you know regional lymph nodes are positive but the lymph node level is unknown, code 000
- If no lymph nodes are involved clinically or pathologically, code 000
SSF9: EXTRACAPSULAR EXTENSION
PATHOLOGICALLY, LYMPH NODES

• Extra capsular extension
  • Tumor within lymph nodes extends beyond the wall of the node into the perinodal fat

• Macroscopic
  • May be described in gross dissection
  • Takes priority over microscopic description

• Microscopic
  • May not be evident in gross exam
  • Described in microscopic section of path report

Larynx

DIAGNOSIS AND TREATMENT

TREATMENT-LARYNX

• Two categories
  • Supraglottic
  • Glottic

• No standardized NCCN guidelines for subglottic primaries because they are so rare
**EARLY STAGE**

- In situ
  - Endoscopic removal
  - Stripping
  - Laser
  - Radiation
- Clinical T1-T2, N0, or select T3's
  - Radiation
  - Partial larynx preserving endoscopic surgery
  - Radiation and/or chemotherapy if adverse features

**CT3 N0-1**

- Concurrent systemic therapy or radiation
- If residual tumor, then may have a neck dissection
- If clinical N1 prior to therapy, they will do clinical assessment 4-8 weeks after therapy. If positive, they will do a neck dissection.
- Laryngectomy with ipsilateral thyroidectomy
  - Neck dissection if cN1
  - Salvage surgery and neck dissection if residual tumor of the primary site
- Induction chemotherapy
- Clinical trials

**SURGERY**

- Hemilaryngectomy (30)
  - Left or right half of larynx including thyroid cartilage, false cord, ventricle, and true vocal cord.
- Partial laryngectomy (30)
  - Part of thyroid cartilage and corresponding portions of laryngeal mucosa.
- Supraglottic laryngectomy (33)
  - Part of larynx superior to the true vocal cord (transection through the ventricles)
- Total laryngectomy (41)
  - Entire larynx
- Radical laryngectomy (42)
  - Entire larynx and adjacent sites
**Surgery**

- Unresectable tumor
  - Surgeon does not feel they can remove all gross tumor
  - Local control of the tumor will not be achieved

- Salvage surgery
  - Patients who do not have a complete clinical response to chemotherapy or radiation may have salvage surgery

**CT3 N2-3**

- Concurrent systemic therapy or radiation
  - If residual tumor, then may have a neck dissection
  - Will do clinical post-treatment assessment 4-8 weeks after therapy completed. If positive they will do a neck dissection.

- Laryngectomy with ipsilateral thyroidectomy
  - Neck dissection if cN1
  - Salvage surgery and neck dissection if residual tumor of the primary site

- Induction chemotherapy

- Clinical trials

**CT4A**

- Total laryngectomy with thyroidectomy and neck dissection if indicated followed by adjuvant radiation and/or chemotherapy
THYROID HISTOLOGY

- Follicular cells
- Thyroid hormone (thyroxine + triiodothyronine)
- C cells (parafollicular cells)
- Calcitonin
- Lymphocytes
- Stromal cells
**THYROID HISTOLOGY**

- Main histologic types
  - Differentiated (93%)
    - Papillary (80%)
    - Follicular (11%)
    - Hurthle (3%)
  - Medullary (85%)
    - Medullary (4%)
  - Anaplastic (76%)

*Based on 53,856 patients treated for thyroid cancer between 1985 and 1995*

**QUESTION**

- How many primaries should be reported when a complete thyroidectomy specimen shows two tumors: 1.8 cm papillary carcinoma with tall cell features (8344/3) and a 0.4 cm papillary thyroid carcinoma (8260/3)?
QUESTION

• Is papillary thyroid carcinoma an NOS histology qualifying for rule M16, thus leading to a single primary, or would M17 apply (multiple primaries)?
  • The histology codes are different at the second digit (8260 and 8344)?
  • While rule M16 doesn’t include papillary thyroid carcinoma in the listed histologies, it seems like it may be an NOS histology for the thyroid. In addition, code 8260/3 is listed as NOS in the ICD-O-3.

ANSWER

• Apply rule M16 and abstract a single primary.
  • These two thyroid tumors, one papillary carcinoma with tall cell features (8344/3) and one papillary thyroid carcinoma, fit the criteria for rule M16, although not explicitly listed there.
  • We will clarify this in the next version of the rules.

SEER SINQ

THYROID: CHAPTER 8
AJCC CANCER STAGE: THYROID

- ICD-O-3 Topography Codes
  - C73.9
- ICD-O-3 Histology Code Ranges
  - 8000-8576, 8940-8950, 8980-8981

AJCC CANCER STAGE: THYROID CLASSIFICATION

- Clinical staging
  - Evidence prior to treatment
  - Inspection and palpation of thyroid gland and regional lymph nodes
  - Laryngoscopy
  - Thyroid gland tumor biopsy
  - Imaging
- Pathologic staging
  - Evidence obtained in clinical staging and in histologic study of surgically resected specimen

AJCC CANCER STAGE: THYROID

- T Category
  - TX: Primary tumor cannot be assessed
  - T0: No evidence of primary tumor
  - T1: 2 cm or less in greatest dimension limited to thyroid
    - T1a: 1 cm or less, limited to thyroid
    - T1b: More than 1 cm but not more than 2 cm in greatest dimension, limited to thyroid
  - T2: More than 2 cm but not more than 4 cm in greatest dimension limited to thyroid
AJCC CANCER STAGE: THYROID

T Category

- T3: More than 4 cm in greatest dimension limited to thyroid or any tumor with minimal extrathyroid extension
- T4a: Moderately advanced disease. Any size extending beyond thyroid capsule to invade subcutaneous soft tissues, larynx, trachea, esophagus, or recurrent laryngeal nerve
- T4b: Very advanced disease. Invades prevertebral fascia or encases carotid artery or mediastinal vessels

AJCC CANCER STAGE: THYROID

All anaplastic carcinomas are considered T4

- T4a: Intrathyroidal anaplastic carcinoma
- T4b: Anaplastic carcinoma with gross extrathyroid extension

AJCC CANCER STAGE: THYROID

Descriptors to subdivide T categories

- Solitary tumor – (s)
- Multifocal tumor – (m)
**AJCC CANCER STAGE: THYROID**

- **N Category:**
  - **NX:** Regional lymph nodes cannot be assessed
  - **N0:** No regional lymph node metastasis
  - **N1:** Regional lymph node metastasis
    - **N1a:** Metastasis to Level VI (pretracheal, paratracheal, and prelaryngeal/Delphian) lymph nodes
    - **N1b:** Metastasis to unilateral, bilateral, or contralateral cervical (Levels I, II, III, IV, or V) or retropharyngeal or superior mediastinal lymph nodes (Level VII)

- **M Category**
  - **M0:** No distant metastasis
  - **M1:** Distant metastasis

**POP QUIZ**

- 2/2/15 50 year old white female with palpable thyroid mass
- 2/2/15 CT of neck and chest: Right lobe thyroid lesion, 3.5 cm; no lymphadenopathy; no lung abnormalities
- 2/4/15 Needle biopsy, thyroid: Papillary carcinoma, moderately differentiated
- 2/18/15 Thyroidectomy with lymph node sampling: 3.5 cm papillary carcinoma, moderately differentiated, of thyroid extends into the cricothyroid and inferior pharyngeal constrictor muscles. 1 Delphian node positive of 5 nodes removed
POP QUIZ

- What is the AJCC clinical stage?

- What is the AJCC pathologic stage?

Summary Stage 2000
http://seer.cancer.gov/tools/ssm/

THYROID
C73.9

SUMMARY STAGE 2000: THYROID

- 0 In situ
  - Noninvasive; intraepithelial
- 1 Localized only
  - Single or multifocal invasive tumor(s) confined to thyroid
  - Into or through thyroid capsule, but not beyond
  - Localized NOS
**SUMMARY STAGE 2000: THYROID**

- 2 Regional by direct extension only
  - Extension to
    - Blood vessel(s) (major)
    - Carotid artery; jugular vein; thyroid artery or vein
    - Cricoid cartilage
    - Esophagus
    - Larynx
    - Nerves
    - Recurrent laryngeal; vagus

- 3 Regional lymph node(s) involved only
  - Anterior deep cervical (laterotracheal) (recurrent laryngeal)
  - Paralaryngeal
  - Paratracheal
  - Peribronchial; Delphian node
  - Pretracheal
  - Cervical NOS
SUMMARY STAGE 2000: THYROID
• 3 Regional lymph node(s) involved only
  • Internal jugular, NOS
  • Deep cervical, NOS
  • Lower NOS
  • Jugulo-omohyoid (supraomohyoid)
  • Middle

SUMMARY STAGE 2000: THYROID
• 3 Regional lymph node(s) involved only
  • Mediastinal NOS
  • Posterior mediastinal (tracheoesophageal); upper anterior mediastinal
  • Retropharyngeal
  • Spinal accessory (posterior cervical)
  • Supravacular (transverse cervical)
  • Regional lymph node(s) NOS

SUMMARY STAGE 2000: THYROID
• 4 Regional by BOTH direct extension AND regional lymph node(s) involved
  • Codes 2 + 3
  • 5 Regional NOS
SUMMARY STAGE 2000: THYROID
• 7 Distant site(s)/lymph node(s) involved
  • Distant lymph node(s)
    • Mandibular
    • Submandibular (submaxillary); submental
    • Other distant lymph node(s)

SUMMARY STAGE 2000: THYROID
• 7 Distant site(s)/lymph node(s) involved
  • Extension to: Bone; mediastinal tissues; skeletal muscle, other than strap or sternocleidomastoid muscle; trachea
  • Further contiguous extension
  • Metastasis

• 9 Unknown if extension or metastasis

POP QUIZ
• 2/2/15 50 year old white female with palpable thyroid mass
• 2/2/15 CT of neck and chest: Right lobe thyroid lesion, 3.5 cm; no lymphadenopathy; no lung abnormalities
• 2/4/15 Needle biopsy, thyroid: Papillary carcinoma, moderately differentiated
• 2/18/15 Thyroidectomy with lymph node sampling: 3.5 cm papillary carcinoma, moderately differentiated, of thyroid extends into the cricothyroid and inferior pharyngeal constrictor muscles. 1 Delphian node positive of 5 nodes removed
POP QUIZ

What is the Summary Stage 2000?

a. 0 In situ
b. 1 Localized only
c. 2 Regional by direct extension only
d. 3 Regional lymph node(s) involved only
e. 4 Regional by BOTH direct extension AND regional lymph node(s) involved
f. 5 Regional NOS
g. 7 Distant site(s)/lymph node(s) involved

CS V0205
THYROID C 73.9

SSF1: SOLITARY VS. MULTIFOCAL TUMOR

• Record whether thyroid cancer is solitary tumor or multifocal
DIAGNOSIS AND TREATMENT

DIAGNOSING THYROID CANCER

- Physical exam
- Blood tests
  - Check levels of thyroid-stimulating hormone (TSH)
  - Check levels of calcitonin
- Imaging
  - Ultrasound
  - Radioidine (thyroid) scan
  - Positron emission tomography (PET) scan
  - Octreotide scan
- Biopsy
  - Fine-needle aspiration
  - Surgical
THYROID NODULES

- Hot nodule
  - Absorbs iodine on thyroid scan
- Cold Nodule
  - Does not absorb iodine on thyroid scan

TREATMENT FOR PAPILLARY AND FOLLICULAR CARCINOMA

- Surgery
  - Ipsilateral lobectomy plus isthmusectomy (23)
  - Total thyroidectomy (50)
    - Completion thyroidectomy (50)
- Iodine-131 (I-131 or RAI)
  - Unresectable tumors
  - Post thyroidectomy
  - Radiation Treatment Volume should be coded to 33-Whole Body

TREATMENT FOR PAPILLARY AND FOLLICULAR CARCINOMA

- External Beam Radiation
  - May be done with 131 I treatment for locoregional recurrence
  - May be used as adjuvant therapy if tumor does not show uptake of iodine
**THYROXIN SUPPRESSION OF THYROID STIMULATING HORMONE (TSH)**

- Synthroid should be coded as hormonal treatment for thyroid cancer.
- This drug has two benefits:
  - It supplies the missing hormone the thyroid would normally produce
  - It suppresses the production of thyroid-stimulating hormone (TSH) from the pituitary gland. High TSH levels could conceivably stimulate any remaining cancer cells to grow.

**QUESTION**

- If a patient is taking Synthroid prior to being diagnosed with thyroid cancer and having total thyroidectomy, is Synthroid still coded as hormone therapy 1st course of treatment after cancer directed surgery?

**ANSWER**

- Yes, it is still considered 1st course treatment and the date of treatment would be the date of the patient's diagnosis of the thyroid malignancy.
**TREATMENT**
- Medullary Carcinoma
  - Total thyroidectomy and bilateral central neck dissection (level VI)
  - External beam radiation
- Anaplastic Carcinoma
  - Surgery if localized
  - External beam radiation
  - Chemotherapy

**QUESTIONS?**
