FCRA/FCDS Combined Annual Conference August 1-3, 2001 in Plantation, Florida *"Partners in Education"*

The Florida Cancer Registrars Association and the Florida Cancer Data System united efforts this year to bring an outstanding program to the 136 people attending our first combined annual conference. Congratulations to the joint FCRA/FCDS Planning Committee on a job well done!

The conference logo showing two people united in support of a shared goal signified by a single lighted torch, beautifully illustrated the joint effort. The "Lamp of Knowledge" below the two forms also helped to convey the message of cooperative effort in pursuit of enlightenment through education.

We were thrilled to have so many people in attendance with registrations far exceeding any of our expectations. The joint conference was such a success that we are already working together to bring Florida a combined conference next year in Sarasota, Florida. The dates for next year's conference are July 31, 2002 - August 2, 2002 so plan early, mark your calendar, and make all of the necessary arrangements so that you are able to attend next year's conference.

The conference was opened with a welcome by both Donna Edwards, President of FCRA, and Jill MacKinnon, Administrative Director of FCDS.

FCRA **FCDS**

The first presentations were "FCDS The Year in Review," "FCDS Finishing up the Year 2000" and "FCDS Welcome to FCDS 2001." These presentations summarized the 2000 reporting year and introduced the many changes taking place for 2001.

The second presenter was Dr. Mitchell K Rauch. His presentation on Bladder Cancer provided registrars with a

thorough review of the classification, diagnosis and treatment of bladder cancers.

FCDS then followed with a review of the new reporting programs FCDS has introduced during the past year and an introduction to reporting programs planned for implementation during the next couple of years.

A wonderful luncheon followed the morning's presentations. This luncheon also provided FCRA members with the Annual Business Meeting and installation of the 2002 FCRA President and other members of the FCRA Executive Committee. Congratulations

Ambulatory Centers Cancer Reporting Program Update

Since the initiation of the Ambulatory Centers Cancer Reporting Program numerous questions, concerns and misinformation have circulated regarding how this program operates and whether or not certain ambulatory care centers are exempt or should be exempt from reporting cancer cases to the Florida Cancer Data System. Hopefully, this article will help to clear up many of these concerns.

Start of the Program:

On January 1, 2000, the Florida Cancer Data System (FCDS) officially kicked off the Ambulatory Centers Cancer Reporting Program (ACCRP). The program was initiated following an amendment to the Florida Statute requiring that all healthcare facilities report cancer cases to the Florida Cancer Data System. The amendment, which expanded reporting to include all ambulatory surgical centers and free-standing radiation oncology centers, was approved by vote effective July 1997. Thus, the official start date for cancer reporting began with July 1, 1997 patient encounters.

Duplication of Effort Concerns:

There was a great deal of concern at the time the amendment was passed that the surgical centers and radiation oncology centers would be duplicating the efforts of existing cancer case

reporting because cancer case reporting was also required by both hospitals and pathology laboratories in Florida. **This could not be further from the truth.**

In order to avoid duplication of state cancer reporting efforts, FCDS 'clears' all of the AHCA data through the FCDS files before sending any information requests to you. Therefore, all of the cancer patients that have been treated in your facility that have already been reported from another source are not included in the FCDS request for information. FCDS is only requesting the Ambulatory Centers to provide information on cancer patients that have not been seen in any other facility in Florida.

Since the Ambulatory Centers Cancer Reporting Program began, the data from these Centers has contributed greatly to the State of Florida's cancer incidence. Based on the increased incidence data it has become increasingly clear that many of the new cases were being diagnosed and treated in free-standing ambulatory care centers. These cases were actually being overlooked in the general cancer statistics for our state and contributed to the growing problem of under-reporting of cancer cases diagnosed and treated in Florida.

Why Can't FCDS Use Pathology Reports and Leave the Ambulatory Centers Alone?

The answer to this is very simple. The data on a pathology report is not sufficient to provide a cancer registry with a complete abstract. The pathology report is an important piece of the abstract, but only a portion of it.

In fact, FCDS does obtain pathology report information from surgical pathology laboratories. The pathology report only provides FCDS with a

cancer identification mechanism, that is all. Each of these pathology reports must be 'followed-back' to the reporting institution or physician for additional information in order to complete a case abstract. Therefore, our notification to the Ambulatory Centers of an unmatched cancer patient is the equivalent to this 'follow-back' notification. We are asking each of you for different parts of a single case.

ACCRP Case Identification - Options:

Ambulatory Care Centers have two options for case identification.

Option One: An ambulatory care center may choose to report all cancer cases seen in that facility on an on-going basis. This option requires that the facility identify and report all cancer-related patient encounters according to the rules and guidelines outlined in the 2001 FCDS Data Acquisition Manual (DAM). This is done by reviewing every patient encounter coded with an ICD-9 cancer diagnosis (primary or secondary) as listed in the 2001 FCDS DAM on page I-8. Please note that this listing may also be referenced via the FCDS website (<http://www.fcds.med.miami.edu>).

Option Two: A center may choose to report only the cancer cases identified by FCDS on the annual AHCA Patient Listing supplied by FCDS. This listing is usually distributed by FCDS to the ambulatory care centers in mid-summer, depending on when FCDS receives and processes the data from AHCA.

The listing is created by FCDS utilizing the AHCA patient encounter data for each ambulatory patient care facility. The AHCA files are matched to the FCDS files and any case that does not appear in the FCDS files is required to be reviewed and reported to FCDS by

the deadline indicated with the report listing. *Note: Only cancer-related ICD-9 codes for the patient encounters are used in the matching process. These might include both primary and secondary diagnoses.*

ACCRP Case Abstracting Personnel - Options:

Once cases are identified, there are numerous options to consider when selecting personnel to perform the cancer reporting function for your facility. Please be sure to use someone trained in cancer registration to abstract and report cancer cases to FCDS. This will save you time and money in the long run.

One option to consider is using someone on your own staff to abstract and report cancer cases. FCDS offers a three-day training workshop for beginners, usually in the spring and fall of each year. The FCDS DAM contains additional information regarding selecting someone from your own staff, including qualifications for training in this position.

Contract abstractors are another viable and often the selected option for performing this function in ambulatory care centers. FCDS maintains a list of independent contractors and contracting companies operating in the state of Florida. Please feel free to contact FCDS for a current listing.

Finally, if the facility is in partnership with a larger healthcare cooperative effort, a shared/traveling abstractor may be used to fulfill this job. Again, this person should be trained and qualified to abstract cancer cases in Florida.

Case Reporting - Facilities with Fewer than 35 Cancer Cases Identified:

Any facility with fewer than 35 cancer cases identified (either at the time of initial AHCA case identification or following review of patient records from the AHCA Patient Listing) are only required to send FCDS copies of medical records for each patient noted.

FCDS requests that copies of any and

all pertinent reports be included for each case. Pertinent reports may include; encounter face sheet, history & physical, summary, consultations, operative & pathology reports, laboratory reports, radiology reports and any other report which helps to document the diagnosis, treatment or follow-up related to a patient's cancer. Not all of these reports may be in the patient's medical record. If a report is not in the record, please note that it is not available.

Please be sure to include the standard FCDS Batch Transmittal Form with any copies of medical records sent to FCDS. This form can be found in Section I, page 1-29 of the 2001 FCDS Data Acquisition Manual or can be downloaded from the FCDS website.

NOTE: If the facility does not have a copy of one or more of the reports requested, then simply make a note that copies of the pertinent report(s) are not available. We realize that you cannot send us what you do not have. Just let us know which reports are not available in the record.

Case Reporting - Facilities with 35 or More Cancer Cases Identified:

Any facility with 35 or more cancer cases identified either at the time of initial AHCA case identification or following review of patient records from the AHCA Patient Listing are required to send FCDS fully abstracted cancer cases. These cases must be abstracted in accordance with all of the guidelines and rules as outlined in the 2001 FCDS Data Acquisition Manual. This manual can be requested through FCDS at 1-800-906-3034 or can be downloaded from the FCDS website at <http://www.fcds.med.miami.edu>.

Data Submission

As of July 1, 2001, all cancer cases submitted to FCDS must be submitted through the FCDS IDEA which is found on the FCDS website or vendor software. Information regarding case submission using the FCDS IDEA can be obtained either through FCDS at 1-800-906-3034, by reviewing past FCDS

Monthly Memos and the quarterly FCDS Register or by visiting the FCDS website at <http://www.fcds.med.miami.edu> and clicking on FCDS IDEA, FAQ's.

Where to Find More Information:

All of this information is included in Section I of the 2001 Florida Cancer Data System Data Acquisition Manual. This section includes the state legislation establishing and maintaining FCDS, the requirements for reporting including the types of cancers that must be reported, the information required to be reported and the options for reporting.

The manual can be ordered through FCDS at 1-800-906-3034 or can be downloaded from the FCDS website at <http://www.fcds.med.miami.edu> (downloads page). 25

SEER Summary Staging Manual 2000

is now available free of charge for orders of 20 or fewer. Visit the SEER website at: <http://www-seer.ims.nci.nih.gov>

Completeness Report

As of October 1, 2001
Calendar Year 2001 Admissions
4% complete - 25% expected

Continued from page 1: FCRA/FCDS Conf.

to all of the incoming FCRA officers and best wishes on a productive year.

The first afternoon was very informative with Dr. Parvin Ganjei-Azar and Dr. Pasquale W. Benedetto providing attendees with an interesting presentation on the "Pathology of Neuroendocrine Neoplasia" and an "Overview of Carcinoid Tumors from a Clinical Perspective." These presentations combined to give registrants a solid understanding on all points from diagnosis to treatment to follow-up of these important tumors.

The first day was wrapped up with Dr. Lora E Fleming and Dr. Jay Wilkinson providing the audience with a variety of study updates as well as some new studies and reports involving "Using FCDS Data in Research Applications."

Day 2 began with a Welcome by American Cancer Society representative Ellen Graves and Florida Department of Health representative Anne Mulbach. Dr. Edward Trapido, FCDS Project Director, was introduced and provided conference attendees with an interesting update on "Disparities in Cancer Among Floridians." Jill MacKinnon followed with an eye-opening presentation on the "Effects of out of State Data and Death Certificate Only Cases on Cancer Rates."

Dr. Michael E Kasper continued the morning session with his presentation on "Intensity Modulated

Radiotherapy."

Our annual conferences would not be complete without a presentation by FCDS on Policies and Procedures. This has been a challenging year of change for all registrars in Florida and this thorough review of the changes in FCDS Policies and Procedures was right on target.

Lydia Voti, Joy Houlahan and Mary O'Leary also reviewed the FCDS Quality Control efforts for the year and provided listeners with tips and pointers on things to look for while abstracting cases. The quality control staff continually provide direction to both FCDS and all Florida abstractors with regard to improving abstracting skills utilizing computerized and visual editing as well as ad-hoc and on-site quality control studies.

Thursday afternoon provided the professional registrar with up-to-date information on "Collaborative Staging" and "Abstracting of Hematopoietic Cases" by April Fritz. April is always a welcome presenter and provides our state with the latest on what is going on across the nation in our chosen field. Thanks April !!!

April's talks were separated by a presentation by Dr. Alan Pierce on "Myelodysplasia & Myeloproliferative Diseases and Disorders." This presentation was one of the most well received of all during the three day conference.

Finally, FCDS concluded the second day with a much anticipated presentation on "FCDS New Technologies and Internet Abstracting." Mark Rudolph and Steven Peace provided the audience with many of the answers to burning questions on why, how and when the new Internet abstracting and batch uploading procedures will be available and how they work. A brief overview of the FCDS was also provided.

Electronic Registry Systems hosted an outstanding reception Thursday evening, complete with food, entertainment and plenty of "Florida-style networking."

Day 3 was all about "Advanced Abstracting, Staging and Coding." Steven Roffers, PA, CTR from Emory University was the presenter for this day-long extravaganza. THANKS Steven and we hope to have you back again soon for more.

All-in-all, this year's collaboration between FCRA and FCDS was an outstanding success. Thanks to our colleagues at FCRA, April Fritz, Steven Roffers, the FCRA/FCDS Planning Committee, the many FCDS presenters and of course the physicians who each took time out of their busy schedules to bring us an interesting and powerful program. CONGRATULATIONS TO ALL ON A JOB EXTREMELY WELL DONE!!! ☺

The following individuals passed the March, 2001 CTR Exam in Florida:

Natalie Anderson - Lauderhill, FL	Maggie Herrera - Leesburg, FL
Keva Badaloo - Lauderhill, FL	Cindy Julius - Venice, FL
Rita Chmela - St. Petersburg, FL	Stacye Mathis - Orlando, FL
Maria Diaz-Pagan - Plantation, FL	Sharon Preston - St. Petersburg, FL
Marianne Dodds - Sarasota, FL	Jeanie Pringle - Cortez, FL
Ampara Gerena - Orlando, FL	Laura Salsbury - Tarpon Spring, FL
Jan Goettsche - Trenton, FL	Hortense Shimbue - Wellington, FL
Eric Grosmaire - St. Petersburg, FL	

Congratulations!

2001 JEAN BYERS MEMORIAL AWARD FOR EXCELLENCE IN CANCER REGISTRY

Once again, FCDS is honored to present the *Jean Byers Memorial Award for Excellence in Cancer Registration*. Recipients will be receiving their plaques/plates in the near future. Seventy-four facilities were found to be eligible to receive the award based on the following criteria:

- ✓ All deadlines met from July 1, 2000 through June 30, 2001 including the 1998 Death Certificate Notification, the 1999 Death Certificate Notification, and the submission of all 2000 cancer case admissions by the June 30, 2001 deadline.
- ✓ No more than 5% (or 35 cases whichever is greater) of the 2000 cancer case admissions reported to FCDS within 2 months following the June 30, 2001 deadline.
- ✓ No more than 10% of the 1999 cancer case admissions reported to FCDS within 12 months following the June 30, 2000 reporting deadline.
- ✓ Submission of signed *Jean Byers Award Application Form* by August 15, 2001.
- ✓ Submission of signed *Affidavit of Completeness* by August 15, 2001.

FCDS is proud to present the *2001 Jean Byers Memorial Award for Excellence in Cancer Registration* to the following facilities:

1505	Cape Canaveral Hospital	4516	Leesburg Regional Medical Center
1506	Parrish Medical Center	4546	South Lake Hospital
1546	Holmes Regional Medical Center	4605	Lee Memorial Health System
1547	Wuesthoff Memorial Hospital	4670	South West Florida Regional Medical Center
1606	Memorial Regional Hospital	4770	Tallahassee Community Hospital
1609	Imperial Point Medical Center	5100	Blake Medical Center
1610	Memorial Hospital Pembroke	5105	Manatee Memorial Hospital
1676	Plantation General Hospital	5200	Ocala Regional Medical Center
1846	Charlotte Regional Medical Center	5205	Munroe Regional Medical Center
2000	Orange Park Medical Center	5471	Mariners Hospital
2146	Naples Community Hospital	5505	Baptist Medical Center-Nassau
2246	Lake City Medical Center	5606	Twin Cities Hospital
